

# Nottingham Mounted Police: Body-Worn CCTV

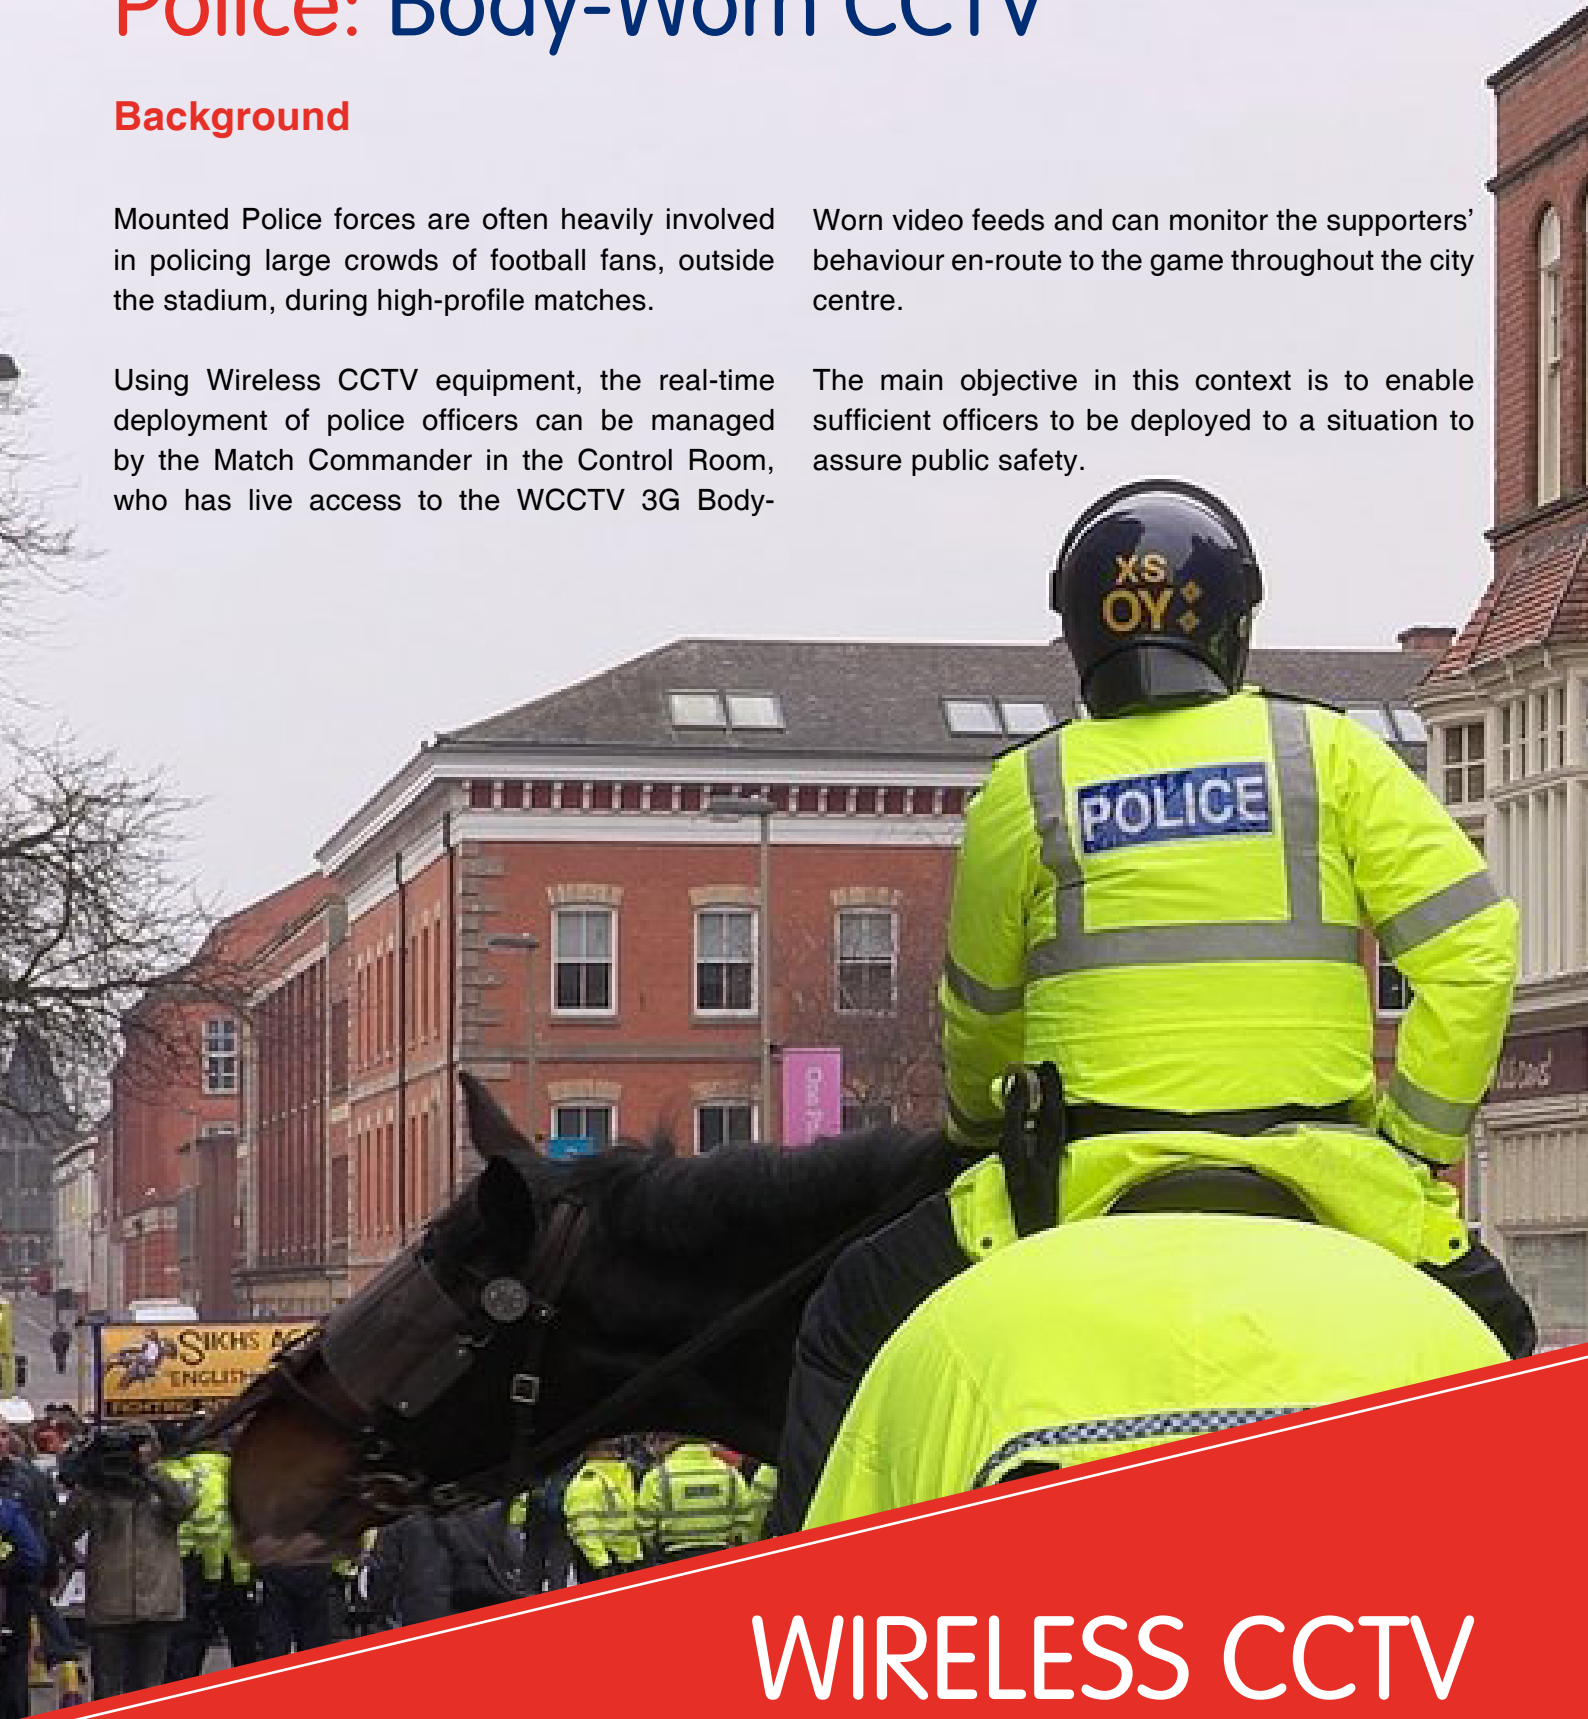

## Background

Mounted Police forces are often heavily involved in policing large crowds of football fans, outside the stadium, during high-profile matches.

Using Wireless CCTV equipment, the real-time deployment of police officers can be managed by the Match Commander in the Control Room, who has live access to the WCCTV 3G Body-

Worn video feeds and can monitor the supporters' behaviour en-route to the game throughout the city centre.

The main objective in this context is to enable sufficient officers to be deployed to a situation to assure public safety.

# Nottingham Mounted Police: Body-Worn CCTV

## The Solution

In order to provide Control Room operators with real-time video footage and allow assessment of the situation on the ground, Mounted Police officers have been equipped with WCCTV body-worn CCTV.

The 4G camera vest's central unit uses a robust Compact Flash card for digital evidential recording of agents' video footage.

Using 4G mobile phone technology, images and sound can be remotely monitored by a supervisor, who can evaluate the situation in real-time and despatch assistance or advise the agent on possible courses of action.

A GPS receiver can be integrated, allowing control room operators to track and map deployed agents.

## The Result

During a Category C football match, the camera transmitted live pictures to the control room. This allowed forward planning during an escort of approximately 300 away supporters. When potential escalating disorder was occurring, the camera was deployed to the area to give a true picture of the situation rather than being reliant on subjective input from individual officers.

On a separate occasion, although not transmitting, the recording still took place and was later used as evidence in an arrest and for football banning orders.

## The WCCTV 4G Body-Worn Solution

Wireless CCTV's 3G Body-Worn solutions have been developed in order to satisfy the growing demand for body-worn surveillance with remote access to live video and GPS information in both overt and covert environments.

WCCTV has developed a range of overt solutions including camera vest, belt and back pack options. The systems are ideal for agents who need evidential quality recordings of suspects on the move. The Body-Worn solution can be provided with head or chest camera.

## Features & Benefits of the Vehicle Fitted Solution

- Truly portable surveillance solution
- Digital evidential quality recording 4G, with automatic fall-back, guarantees virtually unrestricted geographical coverage
- Instant re-deployability
- Track and map agents' locations at all times using an optional GPS receiver
- Remote access to live and recorded digital footage
- panic alarm button notifies control instantly
- Free unlicensed Single View Software
