How to Amend the Track Settings on a 4G Mini Dome

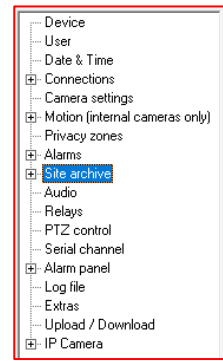

You may have a camera that has been installed on site for a while but now need to add a secondary camera. In this case, you would need to split the HDD Track Settings so that the camera can record from multiple streams.

PLEASE NOTE: Amending the HDD Track Settings will wipe the HDD of all footage.

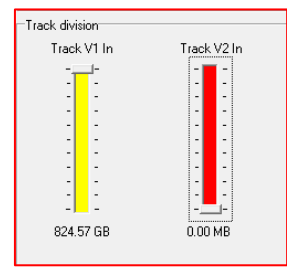

Once dialled into the camera, select **Setup**

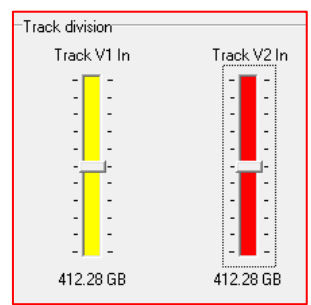

Select **Site Archive**

If you have just one camera mounted, the track settings should look as below

If you have secondary camera mounted, the track settings should look as below

Once the track settings have been amended, select **OK** and then select **Save as Configuration Profile**, these settings will now be saved.
