Trespass & Copper Theft Prevention

How We Help Mitigate Copper Theft & Trespass

Tailored Solutions for Rail Environments

Trespass and copper theft continue to pose significant and persistent threats across the rail network, leading to serious consequences including prolonged project delays, increased safety hazards for both workers and the public, and substantial financial losses due to damage and the cost of repairs.

These incidents not only disrupt operations but also place additional strain on resources and can undermine public confidence in rail infrastructure.

According to Network Rail, cable theft alone costs up to £16 million each year. WCCTV systems help deter these incidents through overt deterrents, thermal detection and live monitoring alerts.

Our units are installed in hotspot areas to mitigate risk and maintain timelines.

Network Rail WCCTV Tower

Trackside Approved Safety & Security

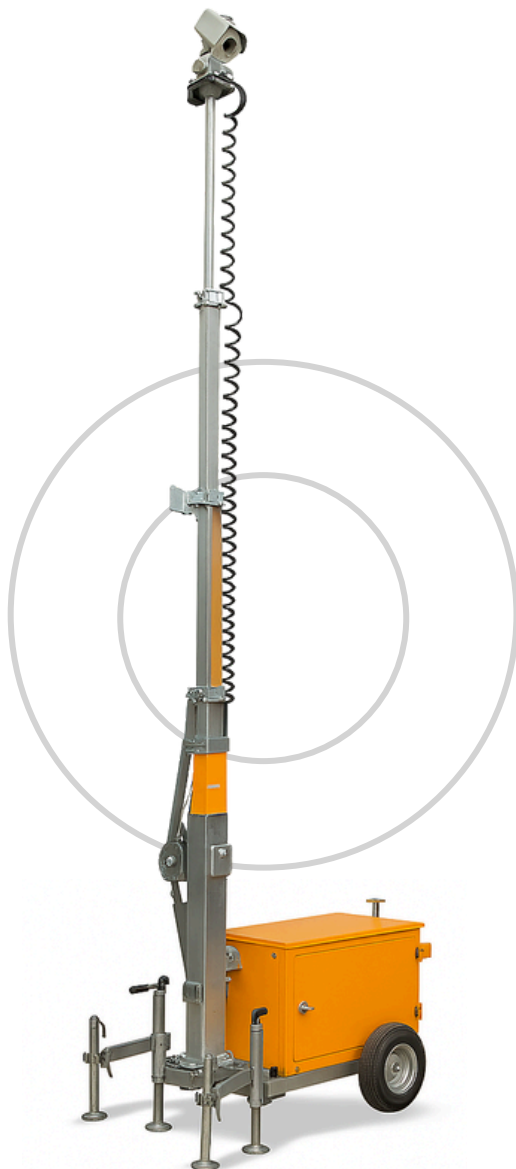

The WCCTV Network Rail Tower is a rapid deployment CCTV tower designed specifically for use on rail infrastructure projects.

Standing 7m tall and painted Network Rail orange, it features a PTZ camera mounted at height to provide a strong visual deterrent and full-site visibility.

Approved for trackside use by Network Rail (PADS Certificate: PA05/04778), the tower supports security, workforce safety, compound oversight and time lapse footage capture.

Key Features Include:

- Non-conductive mast and chassis for trackside deployment.
- Backed by advanced motion detection technology and live monitoring services.
- Save up to 88% on costs compared to employing physical guarding services.

Why Choose WCCTV for Your Surveillance Solution

The Trusted Choice for Rail Security

WCCTV has over 20 years of experience securing rail projects across the UK. We've worked directly with Network Rail and Tier 1 contractors during every Control Period, building a reputation for reliability, compliance and results.

Our systems are PADS approved, deployed by Sentinel-trained teams and backed by NSI Gold Accredited monitoring partners.

Every product is developed in-house to meet the demands of remote, high-risk and fast-moving rail environments.

From trackside equipment and depots to stations and compounds, we understand the challenges rail teams face and tailor our solutions accordingly.

With WCCTV you get more than a product. You get a fully managed service trusted by those delivering critical rail infrastructure.
