

WCCTV

Inside WCCTV's Fully-Managed Asset Protection Service

Introduction

Discover how WCCTV's fully-managed asset protection service safeguards your sites with 24/7 monitoring, rapid response and complete peace of mind. Learn what sets our service apart.

With new, more advanced criminal tactics developing, increased metal prices and changing economic environment, traditional security systems that simply record events aren't enough to protect your site's assets.

Investing in the product is just part of asset protection, it's the service following this that often matters most.

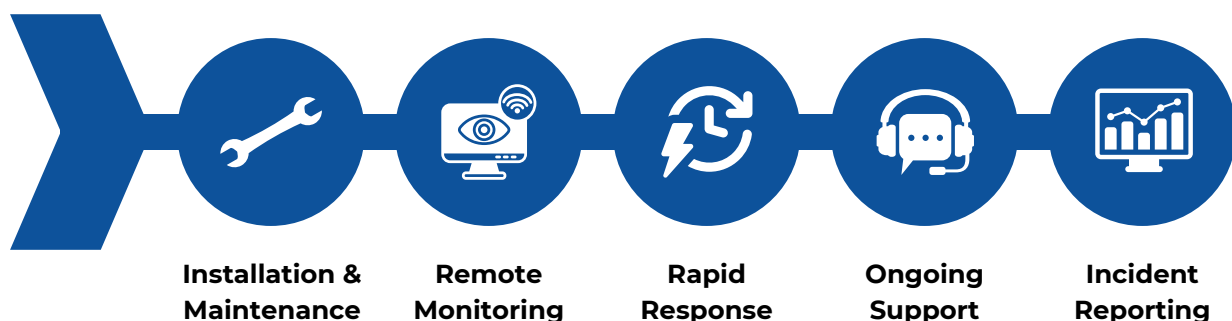

Our fully-managed service developed for asset protection offers high-quality security solutions backed by an expert service that helps to maintain your site's security. But, how? Let's find out.

How Does Our Fully-Managed Service Work?

With WCCTV, **'fully-managed'** means supporting you from start to finish with your projects, from the initial site survey and installation to remote monitoring and ongoing maintenance.

This helps to remove the burden and stress of security from you and place it in our expert hands, so that you can continue focusing on your projects and other key responsibilities.

Installation, Maintenance and Decommissioning

Initially, we offer a detailed site survey. Through this, we identify:

POTENTIAL VULNERABILITIES, BLIND SPOTS, SPECIFIC RISKS

Once completed, we will create a tailored security plan for your site to prevent and manage the risks presented to it.

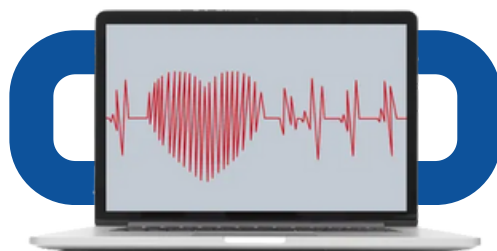

Following the plan agreement, a skilled engineer will install our systems onto your site, ensuring optimal positioning with the products and camera angles.

Installation, Maintenance and Decommissioning

We understand that technology can face errors, therefore, all our products are fitted with **Heartbeat**, a performance monitoring software that carries our daily checks on core features to ensure uptime and identify any issues early.

90% of technical issues can be resolved by rebooting the equipment, so included within our software is a smart switch that remotely resets your system. This avoids the need for you to attend a site for an engineer visit.

For multi-site managers, this reduces time wasting and ensures you can provide more focus on completing your projects. We will work alongside you to arrange a time to decommission or relocate our products.

24/7 Remote Monitoring

Construction sites can be expansive and this leads to increased safety and security dangers, especially when managing multiple sites.

Every year, **53,000 construction** workers suffer non-fatal injuries and for site managers, it's your responsibility to care for workers and assess any incidents thoroughly.

53 
THOUSAND

You cannot have eyes on your site(s) at all times and we have factored this into our fully-managed service by backing our systems with remote video monitoring.

Our cameras link to an NSI Gold Accredited monitoring centre of trained professionals who watch your live video feed day-to-night, proactively assessing threats and responding in real-time.

Real-Time, Rapid Response to Incidents

If unusual or suspicious behaviour is detected, our AI-video analytics will detect this near-instantly, verifying the threat and the monitoring centre will initiate a fast, yet appropriate response to it. This response will be catered to the threat level detected, alerting those responsible or the mobile keyholders of the incident and dispatch them to your construction site.

Our mobile keyholding service is a specialised add-on we offer to our fully-managed service that removes the 2am wakeup calls to attend an incident on-site. Providing an expertly trained security professional instead who will respond to the incidents on your behalf.

Incident Reporting

Passing your security onto a third-party supplier can create uncertainty, especially if a near-incident or incident occurs, and you have no information of this.

We understand the need for honesty and **transparency** within a security partnership, and ensure we have the correct measures in place with our fully-managed service to offer this.

Following any near-incident or incident, we provide a full report on the event, the response and outcome. This gives you complete oversight of your site across all phases of security. These reports can be assessed and any actions applied near-enough immediately.

Benefits of a Fully-Managed Service

Our fully-managed service goes beyond the installation of equipment, it focuses on removing those security stresses from you as a manager and helping eliminate those burdens from your day-to-day. Benefits include:

- 1 Cost-Effective in Comparison to Security Guards
- 2 Specialised Security Suited to Your Site
- 3 Peace of Mind
- 4 Increased Accuracy, Fewer False Alarms
- 5 Prevents and Reduces Construction Theft

Cost-Effective in Comparison to Guards

\$\$\$

Employing security guards to patrol your construction site is expensive, even if they only cover out-of-hours' times.

zzz

They face limitations with coverage on large sites and are prone to risks of inaccurate threat detection due to tiredness or loss of concentration.

88%

Our fully-managed, mobile CCTV solutions can **save up to 88%** on security costs, helping you to reduce overheads without compromising on safety.

Specialised Security Suited to Your Site

Every project is unique, and even when you manage multiple at once, those projects will vary which means so will their security requirements.

Following the site survey, our team continuously works to ensure our solutions help effectively prevent and manage your site's specific risks.

With the support of our cloud-based platform, Stellifii, we offer various integrations with our systems like ANPR cameras, environmental monitoring sensors, intrusion detection and PPE detection.

Peace of Mind

With constant monitoring and rapid incident response capabilities, you can be assured that your site is protected day-to-night.

As a site manager, the stress of managing a site or collection of sites can be overwhelming, especially at night when you know assets are most vulnerable.

Our expert monitoring operators are always on hand to accurately identify threats and take action, so you don't need to.

REAL-TIME MONITORING
RAPID RESPONSE
TRAINED OPERATORS

Increased Accuracy, Fewer False Alarms

Traditional asset protection often triggers false alarms like moving vegetation and animals moving on-site. This can cause severe disruption to your role as a manager and slow down projects.

Our fully-managed service helps to reduce false alarms by combining smart analytics with human verification, so that only genuine threats are identified and responded to. This means increased accuracy, and faster incident response when your site and its assets need it most.

Up to 90% Fewer False Alarms

Prevents and Reduces Construction Theft

Construction theft is a common crime due to the high-value assets held there, and long periods of time they are left vulnerable for.

During this time, criminals tend to assume a lack of security present, making it easier for them to plan their attack and complete it without facing capture.

Our overt CCTV systems alongside remote monitoring services act as both a strong visual deterrent to potential intruders and proactively prevent crime before it even reaches your site.

£800m

lost to construction theft annually

What Sets WCCTV Apart From Our Competitors

When it comes to protecting your assets and site, not all security system suppliers offer the same standard of service, or even a service at all.

At WCCTV, we offer a truly end-to-end security solution that utilises expert knowledge, advanced technology and high-quality support.

But, what sets our asset protection service apart from our competitors?

- **Cutting-Edge Surveillance Technology**
- **Proven Track Record in Construction Site Security**
- **Continuous Performance Checks and Support**

Contact Us

Asset protection shouldn't be complicated, and our fully-managed security service delivers a simple, yet effective response to crime, all within one platform. It delivers complete peace of mind, removing the everyday stress of security from site managers, such as the late night callouts, general frustrations and safety risks. Managing a complex project or multiple sites, and feeling burdened by your security? Speak to one of our experts today to organise a site survey.
