

Which CCTV Solution Is Right for Your Road Project?

Choosing between fixed and deployable CCTV isn't about deciding which technology is better. It's about selecting the solution that best fits your operational requirements. Use this decision guide to identify the most appropriate option.

Final Consideration

If your project is temporary, fast-moving or located where permanent infrastructure isn't practical, deployable CCTV is typically the most proportionate solution. If your monitoring requirement is long-term, predictable and tied to a fixed location, fixed CCTV is likely to deliver better long-term value. The key is choosing the solution that best aligns with your project's duration, site conditions and operational requirements.

Need Help Deciding?

Every project is different. Factors such as deployment timescales, site infrastructure, monitoring objectives and budget all play a role in selecting the right solution. Our team can assess your project requirements and recommend the most appropriate CCTV solution to help improve visibility, support operational decision-making and maximise value throughout your project.
